Experience of code frameworks	Source control, e.g. Git / Github
MySQL	Responsive build techniques
HTML / CSS (SASS)	Experience with RESTful API's
JavaScript	Experience with other JavaScript frameworks is advantageous
jQuery	Magento and Shopify experience
Photoshop to Frontend build	

About Eyeweb

Eyeweb has been creating digital solutions for businesses since 2002 and specialise in developing custom, best-fit solutions for each client using their in-house PHP / Laravel-based CMS "Mission Control". **See our work here > eyeweb.co.uk/projects**

No one is a number at Eyeweb, everyone gets fully involved in each project and we all make decisions together. We also arrange a lot of team activities including foot golf, charity events such as in-office 24 hour sponsored gaming fundraisers.

Training is encouraged at Eyeweb and offered internally, online and through external conferences (the development team went to Laracon in Amsterdam in 2018) so you can expand your knowledge while you work.

The Role

We are looking for an organised and motivated PHP developer who can convert a website design (PSD) into a completed website using our Laravel-based CMS "Mission Control".

The ideal candidate must be passionate about the web, have a good understanding of project-based web development and delivering web-based solutions.
